COVID-19 VACCINES ARE SAFE FOR ADOLESCENTS

Vaccinate adolescents 12—18 years of age as soon as possible to prevent serious illness from COVID-19.

Vaccination reduced risk for COVID-19 hospitalization among adolescents*

*Case-control study, 464 patients (12—18 years) in 19 pediatric hospitals—16 U.S. states—June—Sept. 2021

Adolescents hospitalized with COVID-19:
- 97% Unvaccinated
- 3% Vaccinated

No vaccinated adolescents hospitalized with COVID-19 were admitted to the ICU

Ask your pediatrician or provider about the COVID-19 vaccine today.
